Summary:

Full-stack software engineer with 6+ years of professional experience building, maintaining, and modernizing enterprise systems. Currently a Software Engineer at Ironmark, where I architect a cloud platform migration to AWS, own DevOps and CI/CD, and lead production incident response for a marketing automation stack while also supporting PHP and .NET applications across multiple sub companies. Experienced across AWS (ECS Fargate, Aurora, Lambda, IaC), modern PHP (Laravel, OpenSwoole), C#/.NET (Framework 4.8, .NET 10, ASP.NET MVC/Core), relational databases (MySQL, PostgreSQL, SQL Server), and RESTful API design. Pursuing a Master's in Computer Science at Stevens Institute of Technology (4.0 GPA) with a focus on software architecture.

Skills:

Programming Languages: PHP, Bash, JavaScript, SQL (MySQL, MariaDB, MSSQL), Liquid, C#, HTML, CSS, Python, TypeScript, Lua, VB, and PowerShell

Frameworks & Technologies: AWS (ECS Fargate, Aurora, Lambda, ALB/WAF, IAM, Secrets Manager, CloudWatch), Terraform, GitHub Actions, Docker, Jenkins, Ansible, CI/CD, Laravel, .NET, Django, Node.js, Express.js, React, Angular, Google Cloud Platform, WordPress, Shopify, Drupal, Magento, Joomla, Zend Framework, Tailwind, Meilisearch, Filament, Livewire, Scrapy, FastAPI, Playwright

IDE Experience: PHPStorm, Visual Studio, Sublime, Visual Studio Code, PyCharm, Cursor, & Rider

AI Model Experience: Claude Code (including MCP), Cursor, Claude, GitHub Copilot, Gemini, Llama, DeepSeek

Version Control: Git, GitHub, BitBucket, Beanstalk

Work Experience:

Ironmark, Annapolis Junction, MD (Remote)

Software Engineer (full time)

February 2026 – Present

- Architecting a cloud platform migration for a sub-company at Ironmark, spanning networking, compute, database, and CI/CD. Sole or primary author of the modernization strategy and its foundational infrastructure-as-code, currently running in production.
- Authored the team's authoritative AWS infrastructure reference covering networking, compute, database, load balancing, identity, and secrets. Used as the canonical architecture document for the platform.
- Built the team's CI/CD and observability foundation. Authored the GitHub Actions workflows, verified deployment methodology, multi-server parity governance, and production monitoring detectors covering distinct pipeline failure modes.

- Led a multi-week rescue of a degraded production data pipeline, restoring sync to operational baseline, standing up telemetry to catch failures early, and preventing customer-facing regressions.
- Build and maintain a high-throughput, multi-tenant marketing automation platform (PHP 8.4 / OpenSwoole) with queue-driven async workflows, multi-client isolation, and third-party API integrations.
- Support and enhance a sister sub-company's .NET application suite (Framework 4.8 + .NET 10 / ASP.NET Core), including a back-office production system, RESTful API layer, client-facing analytics dashboard, and campaign management tools.
- Coach team members on AWS work and proper dev workflow for in-house server changes, and help modernize the team's use of AI tooling in engineering work.

The YGS Group, York, PA

Senior Software Engineer | Full Stack (full time)

June 2025 – February 2026

- Led development teams on enterprise e-commerce platforms, automation systems, and API services across a diverse technology stack spanning Laravel/PHP, .NET/ASP.NET with Angular frontend, Node.js/TypeScript, and Python applications.
- Built and maintained multiple Laravel/Lunar PHP e-commerce storefronts with payment processing (Authorize.net, Braintree), shipping integrations (FedEx, USPS), and custom template design and systems for clients.
- Developed and maintained a comprehensive order processing automation platform with SFTP file transfers, Pace API integration, queue-based job processing via Laravel Horizon, and PDF/Excel file processing capabilities.
- Created TypeScript/Express.js microservices including a FedEx shipping API wrapper with semantic versioning and a Cloudflare bot verification service implementing RFC 9421 HTTP Message Signatures.
- Built and maintained advanced Python/Scrapy web scraping platforms with machine learning capabilities, JavaScript rendering via Playwright, and REST API endpoints using Flask and FastAPI.
- Implemented CI/CD workflows with GitHub Actions, Docker containerization, and automated deployment systems for multi-environment support (staging, production, development).

WebFX, Harrisburg, PA

Senior Developer | Full Stack Development (full time)

March 2020 – May 2025

- Developed, implemented, tested, and supported a wide variety of web-based projects primarily built on LAMP stack technologies.
- Creative lead to introduce AI development tools and AI security to the design, front-end development, interactive development, and project management departments.
- Pioneered DevOps workflows to primary client-facing teams to improve local development via Docker and deployments across a variety of LAMP stack servers for client and internal websites.
- Identified and resolved issues on various open-source platforms through debugging and problem-solving techniques.
- Provided consultation to both clients and team members to ensure that enterprise business applications use efficient, profitable technologies.

Prosper IT Consulting, Portland, OR

Software Developer Intern (Full-Time)

Aug – Dec 2019

- Worked within the Agile Methodology (such as Scrum) on a 2-week sprint project.
- Collaborated with teams of developers using Git and Azure DevOps version control systems.

- Fully developed front-end and back-end aspects of an assigned application on the collection of items utilizing Python, Django frameworks, JavaScript, Git, Beautiful Soup, JSON, and Azure DevOps.
- Learned how to use the Django frameworks and Python to reference an API service and render a page of data-scraped articles relevant to a topic.

Keystone Human Services, Cumberland County, PA

Community Support Professional

August 2019 – March 2020

- Clinically oriented support work for adults living with autism.
- Assistance in skill development.

Education:

Stevens Institute of Technology, Computer Science

Fall 2023 – Present

- Computer Science MSCS.
- Classes designed to develop skills as software development leaders and high-quality programmers.
- Specific focus and extra-curricular courses geared toward software architecture.
- Current GPA 4.0.

The Tech Academy, Computer Science

Sept. 2019 – Dec. 2019

- 15-week intensive software development bootcamp with courses in HTML, CSS, JavaScript, SQL, and a primary focus in Python and the Django framework.
- Covered front-end and back-end web and software development.

Messiah College, PA

Aug. 2015 – May 2019

- Music Education K-12, Bachelor of Science.
- Concentration in vocal and piano studies.
- 3.55 GPA (cum laude).
